Governance authority
CISO Assistant: risk, control, treatment and acceptance. GLPI: service and change.
Data and validation authority
OpenMetadata and source systems. MLflow: versioned validation evidence.
Agent runtime
Optional Microsoft AGT wrapper; local SDK exercised. No target credentials.
Identity and trusted facts
Keycloak, OpenFGA and source adapters in target. Lab uses local authoritative records.
Human review
Temporal in target design. Lab approval bound to exact action and source versions.
Action enforcement gateway
Schema, trusted facts, OPA policy, approval recheck, aggregate budget and kill switch.
Exclusive target adapter
Synthetic credit ledger tested in one transaction. Real target needs conditional commit.
Evidence and delivery
Local audit chain and HTTP outbox tested. PostgreSQL and external anchor in target.
Telemetry and response
OTel, Prometheus and DFIR-IRIS; operators contain and restore the business service.
Platform security
OpenBao, Cilium, signed releases and a separately administered evidence archive.
